Parkway-Kew Makes Copper Work

**Copper and Other Non-Ferrous
Wear Applications**

WEAR SOLUTIONS NOW

HISTORY

Parkway-Kew Corporation had been servicing the wire drawing industry for more than 50 years, and has always maintained its presence as a supplier to the copper wire drawing industry; most notably, as an alternative to solid ceramics. However, more recently we have discovered a whole other side of copper drawing whose applications differ dramatically from those of just the standard draw rings (ie. annealers, packaging and wire insulating equipment.)

MATERIALS

Parkway-Kew coating materials for copper and other non-ferrous applications include: metal alloy, tungsten carbide, ceramic and metallizing. Parkway-Kew can customize our coatings to fit you copper or other non-ferrous applications in order to minimize any chemical reaction between the coating and the wire alloy being drawn or its drawing lubricant.

CAPABILITIES

Parkway-Kew Corporation can rebuild worn or manufacture new extreme wear parts for your copper and other non-ferrous wire drawing, packaging and insulating equipment applications. Other in house capabilities include: CNC machining, milling, welding, grinding, and polishing, in addition to roll, shaft and journal restoration.
